### **DETAILED ACTION**

#### ***Allowable Subject Matter***

1. Claims 21 and 23-27 are allowed.
2. The following is a statement of reasons for the allowance: The closest prior art, Okuno et al. teach a solder bump forming apparatus as applied in previous rejections with a thermostat device and heater are arranged above and below a substrate conveyance path where a blower 20 and a thermostat circulation duct 21 defines a circulation path for the thermostat medium and the heating circulation duct 21 defines a circulation path for the heating medium and each have enclosures (walls 19 and jacket 17) which prevent air from being blown in the space which the substrate is conveyed; however the prior art as a whole fails to disclose or render obvious a structure that would be capable of the claimed thermostat and heating circulation paths, wherein the thermostat circulation path provides a thermostat flow path from the main thermostat source, through the cool/heat storage member, along the heat absorbing plate, through the thermostat circulation duct having the sub-thermostat source therein, to the thermostat blower, and returning to the main thermostat source, and, wherein the heating circulation path provides a heating flow path from the main heating source, through the heat storage member, along the covered opening, through the heating device circulation duct having the sub-heating source therein, to the heat blower, and returning to the main heating source. Conversely, the circulation path of the prior art is a much more condensed circulation path which does not include the structural features of the claimed solder bump forming apparatus, which must necessarily be arranged in a

manner to provide the claimed circulation path, there is no teach or motivation in the prior art to add the additional structural features of the claim in the claimed order.
